PROFILE

Computer Engineering student with a strong interest in software development and problem-solving. Currently building skills in C#, Object-Oriented Programming, C++, and SQL, with a background in Digital Logic Design and Circuit Design. Expanding my technical knowledge through the Digital Egypt Pioneers Initiative (DEPI) Full Stack .NET track. Seeking internship and entry-level opportunities to gain practical experience and grow as an aspiring Full-Stack .NET Developer.

EDUCATION

- Ain Shams University
- Bachelor of Engineering in Computer Engineering
- Third-Year Student | Expected Graduation: 2028

TECHNICAL SKILLS

- Programming: C#, C++
- Object-Oriented Programming: C#
- Database: SQL
- Engineering: Circuit Design, Digital Logic Design

PROJECTS

Command-Line Calculator (C++)

- Developed a command-line calculator in C++ supporting arithmetic and exponentiation operations, with input validation, error handling, and formatted output.
- Implemented command-line argument handling and numeric input parsing using C++17.

Solar Tracking System

- Designed a hardware-based solar tracking system using LDR sensors, a servo motor, op-amps, and resistors to detect light direction and adjust the panel position.

Electronic Lock Design

- Designed a digital electronic lock using flip-flops, counters, logic gates, a timer, decoder, and seven-segment display to implement digital control and display logic.

DC Regulated Power Supply

- Designed and built a regulated DC power supply using a transformer, bridge rectifier, capacitor, and Zener diode to obtain a regulated DC output.

COURSES

- Digital Egypt Pioneers Initiative (DEPI) Full Stack .NET Trainee July 2026 – Present (200 Hours)

LANGUAGES

- Arabic – Native
- English – Intermediate
